Keisuke (Adrian) Kato

adriankato@gmail.com | (814) 873-3703 | github.com/adriankato | Brooklyn, NY

Education

The Pennsylvania State University — University Park, PA

- **Bachelor of Science in Computer Science** — 2016-2020
- **Cumulative GPA:** 3.7/4.0

Technical Skills

- *Languages*: Python, TypeScript, C, C#, SQL
- *Frameworks and Libraries*: Flask, Django, React.js, Node.js, GraphQL
- *Tools*: Git, PostgreSQL, MySQL, Unix, Unity

Work Experience

Ernst & Young (EY) – Tax Technology and Transformation: — August '20 – Present

Intelligent Automation Developer: — New York, NY

- Utilized Alteryx to automate tax functions and process data.
- Worked on consulting client-side projects regarding the pandemic.

Undergraduate Research Assistant (C#): — June '19 – August '19

- Designed and built a Virtual Reality Module for an Industrial Engineering course taught in Penn State. The course (IE 322) will have 20 students using it on the Oculus Go.
- Worked on the user-experience side of the VR module to make it easier for students to work through each module. Added voice and text to help students understand the controls.

Penn State's D.A.T.A. Lab (Python, Javascript, CSS): — September '18 – December '18

Software Developer (Part-time):

- Created a Twitter clone using Django and Bootstrap to analyze how Fake news spread through social media. Approximately 200 survey-takers from Amazon MTurk used the web app to provide data for the research.
- Designed the web app to look similar to Twitter's interface using Bootstrap and JavaScript.

Personal Projects

LiteReddit (*React.js, GraphQL, TypeScript, PostgreSQL*): — August '20 – Present

- Built and still iterating on a full-stack web app with React.js and GraphQL. Using PostgreSQL with mock data from Mockaroo. App is meant to be a lightweight version of Reddit.

NittanyPath (**Flask, MySQL, HTML, CSS, JavaScript**): — May '20

- Worked on requirement analysis and conceptual database design to create a course management system that replicates the one used in Penn State.
- Utilized Flask, Jinja and basic CSS for the front-end and created mock data to pass the database requirement.

CruiseBeats (EY Hackathon Challenge - HackPSU '19): — March '19

- Built over a facial-recognition algorithm to make a web-app using Flask to improve user experience while on a cruise. Utilized basic React.js and HTML to create a light-weight web app to present.
